

Professional Ubuntu Server Installation Manual

Component	Required Configuration
Name	Ubuntu-Server-Week03
RAM	4 GB
CPU	2 virtual processors
Storage	40 GB (VDI/VMDK)
Network	NAT (or Bridged if instructed)
Optical Drive	Ubuntu Server LTS ISO

Purpose

This manual provides a reproducible procedure for deploying an Ubuntu Server virtual machine for an enterprise laboratory environment.

Implementation Procedure

Language: Select English.

Keyboard Layout: Select the appropriate keyboard layout, such as English (US).

Network Configuration: Accept DHCP unless instructed otherwise. Record the assigned IP address.

Hostname: Set the hostname to server01.

User Account: Create a non-root administrative user with a strong password.

Disk Partition: Use Guided – Use Entire Disk. Document the partition scheme, file system, and disk size.

SSH Server: Enable Install OpenSSH Server.

Additional Packages: Do not install additional packages unless instructed.

Complete Installation: Restart the VM and remove the installation ISO if prompted.

Post-Installation Verification

Login: Log in using the account created during installation.

Hostname: hostname

IP Address: ip addr

Internet Connectivity: ping -c 4 google.com

System Update: sudo apt update
sudo apt upgrade -y

SSH Service: systemctl status ssh — verify Active: active (running)

Evidence Standard

Use clear screenshots from your own VM. Do not fabricate evidence.

Troubleshooting

APT mirror / 403 Forbidden: Check the repository mirror configured in `/etc/apt/sources.list.d/ubuntu.sources`. If a regional mirror returns 403, change to an available official Ubuntu archive mirror, then run `sudo apt update` again.

SSH service not found: Confirm OpenSSH Server is installed with `sudo apt install openssh-server -y`, then verify with `systemctl status ssh`.

SSH inactive: Run `sudo systemctl enable --now ssh`, then verify with `systemctl status ssh`.

No network address: Check VirtualBox network mode. The Week 03 default is NAT unless otherwise instructed.

Terminal copy/paste problems: Use VirtualBox Shared Clipboard set to Bidirectional and the Linux terminal shortcut `Ctrl+Shift+V` when supported.
